

## 100% Solar Powered

As of March 2015, Millbrook's campus became 100% solar powered.

Our 7-acre solar field is currently the largest producing solar field in Central Hudson's service area! The field—its environmental impact and the science behind its power—is being woven into the curriculum across science courses, independent studies, and CES (Culminating Experience for Seniors) projects. It's one of the tools that moves Millbrook ever closer to being carbon neutral by 2020.

## Dining Hall Progress

We broke ground on the new dining hall in June, and construction is well underway.

Walls are taking shape, and the outline of the main hall—which will seat 400—is already complete with two-story fireplace. The dining hall will be ready for the start of the 2016-2017 school year. Follow us for photo updates that are posted regularly on our website and Instagram feed.
